# WHAT IS SCALP MICROPIGMENTATION?

Scalp Micro Pigmentation is a procedure that is carried out by highly skilled professionals and is used to replicate the hair follicles using a cosmetic tattoo technique. The scalp tattoo is a specialised process during which tiny deposit of pigment is positioned within the dermal layer of the scalp. It makes the hair look like it is a short, shaved hair hairstyle. The treatment is non-surgical and scar-free, allowing instant results enabling your client to walk out of your salon confident with their new hairline.

WHO IS IT FOR? BALDING

Micropigmentation for baldness creates the illusion of a shaved head look that was otherwise unattainable from other cosmetic procedures gives amazing results too, providing the impression of denser hair and definition to the hairline.

WOMEN

The procedure on women is used to reduce the visible difference between the hair colour and the scalp. Finding hair thinning in areas can be a real confidence dropper. The procedure gives hair a fuller look and fills the visible areas where the hair appears thinner. It allows more hair options without the worry of a visible scalp.

SCARRING

Scarring on the head after surgery often results in hair loss on and around the scar tissue. Micropigmentation safely covers up scars with the appearance of a shaved hair.
Whether the scar is surrounded by short shaved hair or longer hair, this procedure reduces the visible scarring giving back confidence and taking any unwanted attention away from that area.

RECEDING

Receding hairlines come to most of us and are something that can reduce your confidence. Our micropigmentation solutions give confidence back by creating a fuller look, reducing visible scalp and bring the hairline back to where it should be.

HOW MANY SESSIONS WILL I NEED AND HOW MUCH WILL IT COST?

You will need at least three sessions to get the density of colour, and depending on what procedure you need it is from £300; however, we will discuss it when you have a consultation.
